

## **M.S. ASSISTANTSHIP: Wind Energy Impacts on Medium and Large Mammals - NEW MEXICO STATE UNIVERSITY**

The Frey Lab for Mammalian Diversity and Conservation and the Lavery Lab are seeking a highly motivated Master's student to research the effects of wind energy development on terrestrial mammal communities. The focal species will include ungulates (e.g., deer, pronghorn), carnivores (e.g., coyotes, bobcats), and lagomorphs (e.g., jackrabbits, cottontails) monitored using remote cameras that the student will deploy in the field. Analyses will be based on occupancy modeling. The research will be conducted at New Mexico State University's (NMSU) Corona Range and Livestock Research Center and adjacent lands managed by the Bureau of Land Management (about 2 hours from NMSU). The student will supervise one or more undergraduate field assistants and volunteers. They are also expected to present their research at professional conferences, publish research results in peer-reviewed journals, and assist with preparation of agency reports and grant proposals. The study will form the basis of the student's Master's thesis co-advised by Dr. Frey and Dr. Lavery in the Department of Fish, Wildlife, and Conservation Ecology at NMSU. Annual salary is \$24,580 (out of state students receive a waiver so that they only pay in-state tuition). The position's start date is 18 January 2023 and the anticipated duration is 2.5 years.

**The Frey and Lavery labs are committed to providing a place of work and learning free from discrimination and harassment and encourages applicants from diverse backgrounds.**

### **Qualifications:**

- Bachelor's degree in wildlife science, biology, or conservation ecology
- > 3.3 GPA
- Ability to work independently
- Ability to supervise undergraduate field assistants
- Good work communication, ability to multitask and stay organized, ability to be motivated and a self-starter
- Ability to be in the field for extended periods of time (e.g., Monday-Friday weekly during summer, periodically during semesters)

### **Preferred Qualifications:**

- Use of remote cameras in wildlife research
- Experience conducting research
- Experience as a seasonal field technician
- Experience working in a remote field setting
- Quantitative aptitude and statistical knowledge
- Experience using ArcGIS/QGIS
- Experience using R
- Excellent writing ability
- Highly competitive GRE scores (e.g., > 70th percentile on verbal and quantitative portion). In lieu of GRE scores, the applicant should demonstrate quantitative aptitude by relevant coursework in mathematics or statistics.
